SELLING A GADGET

Online Advertisement Banner

Academic assignment submitted to the Analysis and Systems Development program at Universidade Veiga de Almeida as part of the Instrumental English course.

Rio de Janeiro

2026

ABSTRACT

This report presents the development of an English-language online advertisement for a simulated pre-owned 11-inch Apple iPad. The activity combined vocabulary related to technology and online commerce with the organization of concise product information in a visual banner. The final piece highlights the product condition, storage capacity, included charger, intended use, price, and a direct call to action.

Keywords: Instrumental English; digital advertising; technology vocabulary; visual communication.

1 INTRODUCTION

Nowadays, digital marketplaces and social media are widely used to buy and sell pre-owned products, especially electronic devices such as cell phones, tablets, and notebooks. These platforms allow sellers to present product information quickly and help potential buyers compare options before making contact.

In this context, the activity proposed the creation of an online advertisement for a gadget in English. The objective was to apply vocabulary related to technology and commerce while organizing information clearly in an advertising banner suitable for online publication.

2 ACTIVITY DEVELOPMENT

A pre-owned 11-inch Apple iPad was selected as the simulated product. The advertisement was designed as an educational exercise, so the product description and price were used only to demonstrate how a concise online listing can be structured in English.

The text was organized to prioritize the information that a potential buyer would normally look for: the condition of the device, its storage capacity, the included accessory, possible uses, the price, and a call to action. Short sentences and familiar vocabulary were used to make the message direct and easy to understand.

- FOR SALE!
- Pre-owned 11-inch Apple iPad
- Excellent condition
- 128GB of storage
- Includes a charger
- Perfect for studying and entertainment
- Only \$400
- Message me if you're interested

The layout uses a large product image, a clear headline, a short list of features, a highlighted price, and a direct contact message. This visual hierarchy helps the reader identify the main information without reading a long description.

The original banner was created in Canva. For portfolio publication, the English wording and visual spacing were revised to improve grammatical accuracy, consistency, and readability.

4 CONCLUSION

This activity provided an opportunity to apply English in a practical context related to technology, online commerce, and digital communication. The final banner demonstrates how simple vocabulary can be used to describe a product, present technical information, state a price, and invite the reader to make contact.

The project also reinforced the importance of visual organization. By combining concise text with a clear information hierarchy, the advertisement communicates its purpose efficiently and remains suitable for publication on social media or online marketplaces.

TOOLS

Canva - graphic design platform used to create the original banner. The portfolio version received language and layout revisions for clarity and consistency.
